

For Dr. Ble — What We Need From You

1. PayPal for Donations (Urgent)

The platform is already configured for PayPal. You need to create a **PayPal Business (or Developer)** account and send us these 3 keys:

- `PAYPAL_CLIENT_ID`
- `PAYPAL_CLIENT_SECRET`
- `PAYPAL_WEBHOOK_ID`

Steps: Go to <https://developer.paypal.com/dashboard> → *My Apps & Credentials* → *Create App* (select "Merchant") → once created, the first two keys appear there. For the Webhook ID: inside the same app, *Webhooks* tab → *Add Webhook URL* → enter `https://ngo-platform-399q.vercel.app/api/payments/webhook` → *Save* → copy the *Webhook ID*.

Without these keys, the "Donate with PayPal" button won't work.

2. Custom Domain (whenever you're ready)

The site is live at `ngo-platform-399q.vercel.app`. To use something like `gapdev.org` or `donate.gapdev.org`:

1. Buy the domain at Namecheap, GoDaddy, etc.
 2. In Vercel: Project Dashboard → *Settings* → *Domains* → add the domain.
 3. At your domain provider: change the nameservers to the ones Vercel provides.
-

3. Optional Environment Variables (for full production)

These enable additional features. The site works fine without them:

Variable	What it does	Where to get it
<code>RESEND_API_KEY</code>	Send real emails (donation receipts, password reset)	https://resend.com → <i>API Keys</i> (free 100 emails/day)
<code>CRON_SECRET</code>	Automatic cleanup of expired tokens and old data	Generate a random string (e.g. <code>openssl rand -hex 32</code>) and add it in Vercel → <i>Settings</i> → <i>Environment Variables</i>
<code>NEXT_PUBLIC_SENTRY_DSN</code>	Error monitoring in production	https://sentry.io → create a Next.js project → copy the DSN

4. Content

- **Photos/videos** for the About, Programs, and Gallery sections (if you have more material).
 - **Testimonials** from beneficiaries for the homepage.
 - **High-resolution logos** for favicon and OG image.
-

If you need help with any of these steps, let me know and I'll guide you through it.
